Math 104: Homework 7 (due March 16)

1. Ross exercise 19.6

2. (a) Let $S$ be a subset of $\mathbb{R}$, and let $f : S \to \mathbb{R}$ and $g : \mathbb{R} \to \mathbb{R}$ be uniformly continuous functions. Prove that the composition $g \circ f : S \to \mathbb{R}$ is uniformly continuous.

   (b) Let $f$ and $g$ be two uniformly continuous functions from $S$ to $\mathbb{R}$. Prove that $f + g$ is uniformly continuous.

   (c) Show that there exist uniformly continuous functions $f$ and $g$ from $S$ to $\mathbb{R}$ such that the multiplication $f \cdot g$ is not uniformly continuous.

4. Ross exercise 20.16

5. Ross exercise 23.5

6. Ross exercise 24.2

7. Ross exercise 24.16

8. Let $f$ be a real-valued continuous function. Recall that for any subset $S \subseteq \mathbb{R}$, then $f(S)$ is defined as $\{ f(x) : x \in S \}$. Suppose that $f(I)$ is open for any open interval $I$. Prove that $f$ is monotonic.
